FUJI ELECTRIC

Instruction Manual

Micro-controller X
Model : PXR5/9

INP-TN1PXR5/9-E

Thank you for your purchasing "Fuji Digital Temperature Controller". Please check that the product is exactly the one you ordered and use it according to the following instructions. (Please refer to a separate operation manual for details.) Dealers are cordially requested to ensure the delivery of this Instruction Manual to hands of the end-users.

NOTICE
The contents of this document may be changed in the future without prior notice.
We paid the utmost care for the accuracy of the contents. However, we are not liable for direct and indirect damages resulting from incorrect descriptions, omission of information, and use of information in this document.

CONTENTS

Check of specifications and accessories

Before using the controller, check if the type and specifications are as ordered.
 (A table of Model code configuration is given in Page 33).

Check that all of the following accessories are included in the package box.

· Temperature controller ------------ 1 unit
· Instruction manual ---------------- 1 copy
· Mounting fixtures ----------------- 2 pcs.
· I/V unit (250Ω resistor) ----------- 1 pc. (4-20mA DC input type only)
· Watertight packing ---------------- 1 pc.

Safety Precautions

Before using this product, the user is requested to read the following precautions carefully to ensure the safety. Safety precautions must be taken by every user to prevent accidents.

The safety requirements are classified into "Warning" and "Caution" according to the following interpretations :

⚠ **Warning**	Suggesting that the user's mishandling can result in personal death or serious injury.
⚠ **Caution**	Suggesting that the user's mishandling can result in personal injury or damage to the property.

⚠ WARNING Over-temperature Protection

"Any control system design should take into account that any part of the system has the potential to fail".

"For temperature control systems, continued heating should be considered the most dangerous condition, and the machine should be designed to automatically stop heating if unregulated due to the failure of the control unit or for any other reason".

The following are the most likely causes of unwanted continued heating:

1) Controller failure with heating output constantly on

2) Disengagement of the temperature sensor from the system

3) A short circuit in the thermocouple wiring

4) A valve or switch contact point outside the system is locked to keep the heat switched on.

In any application where physical injury or destruction of equipment might occur, we recommend the installation of independent safety equipment, with a separate temperature sensor, to disable the heating circuit in case of overheating.

The controller alarm signal is not designed to function as a protective measure in case of controller failure.

1. ⚠ **Warning**

1.1 **Installation and wiring**

- This controller designed to be installed at the following conditions.

Operating temperature	-10 to +50 [°C]	
Operating humidity	90%RH or less (Non condensation)	
Installation category	II	Conforming to IEC1010-1
Pollution degree	2	

- The controller must be installed such that with the exception of the connection to the mains, creepage and clearance distances shown in the table below are maintained between the temperature probe and any other assemblies which use or generate a voltage shown in the table below.
  Failure to maintain these minimum distances would invalidate the EN 61010 safety approval.

Voltage used or generated by any assemblies	Clearance (mm)	Creepage (mm)
Up to 50Vrms or Vdc	0.2	1.2
Up to 100Vrms or Vdc	0.2	1.4
Up to 150Vrms or Vdc	0.5	1.6
Up to 300Vrms or Vdc	1.5	3.0
Above 300Vrms or Vdc	Contact with our sales office.	

- If the voltage shown above exceeds 50Vdc (i.e. hazardous voltage), the basic insulation is required between all terminals of this controller and the ground, and supplementary insulation is required for the alarm output.
  Isolation class of this controller is as shown below. Be sure to check that the isolation class of the controller satisfies your requirements before installation.

—— : Basic insulation,   ------ : Non-insulation,   —— : Functional insulation

Mains (Power source)	Measured value input, CT input
Control output1 (relay output)	Internal circuit
Control output2 (relay output)	Control output1,2 (SSR drive output / Current output)
Alarm outout (AL1)	
Alarm outout (AL2)	Communication (RS-485) circuit
Heater burnout alarm output (HB)	Digital input (DI).

- If there is a danger of a serious accident resulting from a failure or a defect in this unit, provide the unit with an appropriate external protective circuit to prevent an accident.
- The unit is supplied without a power switch and fuses.
  Make wiring so that the fuse is placed between the main power supply switch and this controller.
  (Main power supply: 2 pole breaker, fuse rating: 250V, 1A)
- When wiring the power supply terminal, use vinyl insulated 600 volt cable or equivalent.
- To avoid the damage and failure of controller, supply the power voltage fitting to the rating.
- To avoid an electric shock and controller failure, do not turn ON the power before all wiring is completed.
- Be sure to check that the distance is kept to avoid electric shock or firing before turning the power ON.
- Keep away from terminals while the circuit is energized in order to avoid an electric shock and a malfunction.
- Never attempt to disassemble, fabricate, modify, or repair this unit because tampering with the unit may result in a malfunction, electric shock, or a fire.

1.2 Maintenance precautions

- Be sure to turn off the power before this controller is installed or removed in order to avoid an electric shock, malfunction, and fault.
- Regular maintenance is recommended a longer service life of this controller.
  Some parts of this controller have a limited life span, or they will be deteriorated with the lapse of time.
- One-year warranty is guaranteed for this unit including accessories, provided hat the controller is properly used.

2. ⚠ Caution

2.1 Cautions on installation

Avoid the following places for installation.
- A place where the ambient temperature may reach beyond the range of from 0 to 50°C while in operation.
- A place where the ambient humidity may reach beyond the range of from 45 to 85% RH while in operation.
- A place where a change in the ambient temperature is so rapid as to cause condensation.
- A place where corrosive gases (sulfide gas and ammonia gas, in particular) or combustible gases are emitted.
- A place where the unit is subject directly to vibration or shock.
- A place exposed to water oil, chemicals,steam and vapor.
  (if immersed with water, take the inspection by sales office to avoid an electrical leakage and firing)
- A place where the unit is exposed to dust, salty air, or air containing iron particles.
- A place where the unit is subject to interference with static electricity, magnetism, and noise.
- A place where the unit is exposed to direct sunshine.
- A place where the heat may be accumulated due to the radiation of heat.

2.2 Caution on installation on panel

- Attach the supplied fixtures (2 pcs.) to PXR5/9 at the top and the bottom, and fasten them using a flatblade screwdriver. The fastening torque should be approximately 0.15N·m (1.5kg·cm).
  (The case is made of plastic. Therefore, be careful not to fasten them excessively.)
- The front side of this controller conforms to NEMA 4X(equivalent with IP66).
  To ensure the waterproofness between the instrument and the panel, use packings that are provided as accessories in the following manner: (The improper fitting of packings will ruin the waterproofness.)
  ① As shown in Figure 1, fit a packing to the case of the unit and then insert it in the panel.
  ② Tighten screws on the fixtures so that no gaps are given between the front of controller and packing and between panels as shown in Fig.2. Check that there are no deviation and deformation of packing as shown in Fig.3.
- If panel strength is weak, it may cause a gap between the packing and the panel, thus impairing water resistance.
Fig. 1   Fig. 2   Fig. 3

Standard : Vertical mounting, flush on the panel. (The controller is horizontal.)

When mounting the controller on tilted surface, the maximum tilt angle is 30° (degree) from vertical.

$\alpha = 0$ to $30°$
(Caution)

- Don't block the openings around the controller, or radiation effect will be reduced.
- Don't block the ventilation openings at the top of the terminal block.
- In the case of PXR9, place the mounting fixture into the mounting hole at the center of the main body.

2.3 Precautions in wiring connection

- For the thermocouple sensor type, use thermocouple compensation wires for wiring.
  For the RTD type, use a wiring material with a small lead wire resistance and no resistance differentials among three wires.
- Keep input lines away from power line and load line to avoid the influence from noise induced.
- For the input and output signal lines, be sure to use shielded wires and keep them away from each other.
- If a noise level is excessive in the power supply, the additional installation of an insulating transformer and the use of a noise filter are recommended.
  (Example: ZMB22R5-11 Noise Filter manufactured by TDK)
  Make sure that the noise filter is installed to a place such as a panel that is properly grounded. The wiring between the noise filter output terminal and the instrument power supply terminal should be made as short as possible. None of fuses or switches should be installed to the wiring on the noise filter output side because the filter effect will be degraded by such a installation.
- A better anti-noise effect can be expected by using stranded power supply cable for the instrument. (The shorter the stranding pitch is, the better the anti-noise effect can be expected.)
- For the unit with an alarm against a failure (burn-out) in the heater, use the same power line for connection of the power supplies for the heater and the controller.
- A setup time is required for the contact output when the power is turned on. If the contact output is used as a signal for an external interlock circuit, use a delay relay at the same time.
- Use the auxiliary relay since the life is shortened if full capacity load is connected to the output relay. SSR/SSC drive output type is preferred if the output operations occur frequently.
     [Proportional interval] relay output: 30 seconds or more, SSR/SSC: one second or more
- If inductive load such as magnetic switches connected as a relay output load, it is recommended to use Z-Trap manufactured by Fuji Electric to protect a contact from switching surge and keep a longer life.
     Model :   ENC241D-05A (power supply voltage: 100 V)
                ENC471D-05A (power supply voltage: 200 V)
  Where to install :   Connect it between contacts of the relay control output.

Example)

Z-Trap connection
2.4 Requirement for key operation/operation in abnormalities

- Prior to the operation, be sure to check alarm functions, since a failure in the proper setting will result in a failure in the proper output of an alarm in case of an abnormality.
- A display of UUUU or LLLL will appear in case of a break in the input.   Be sure to turn off the power when a sensor is replaced.

2.5 Others

- Do not use organic solvents such as alcohol and benzine to wipe this controller. Use a neutral detergent for wiping the controller.

Note) Panel cutout dimensions should also satisfy the above values after the panel is coated.

Cautions on close-fit mounting
- With the power supply of 200 VAC or more, a maximum ambient temperature is 45˚C. (It is recommended to use a fan for cooling.)
- When there is another instrument (larger than 70mm) or a wall on the right side of this controller, be sure to install the controller keeping a space of more than 30mm.

Cautions on wiring
- Wiring should be started from the left side terminal (No. 1 to No. 12).
- Use crimped terminals matched to the screw size. Tightening torque should be 0.8 N·m.
- Do not connect anything to terminals not used.

Name of Functional Parts and Functions

Model : PXR5/9

Setting keys

	Name	Function
Ⓢ1	Select key	The key shifting to the 1st, the 2nd or the 3rd block parameter, switching the display between parameter and the data at the 1st, the 2nd and the 3rd block.
Ⓢ2	Up key	· The numerical value is increased by pressing the key once. The numerical value keeps on increasing by pressing the key continuously. · For searching parameters within the 1st, the 2nd and the 3rd block.
Ⓢ3	Down key	· The numerical value is decreased by pressing the key once. The numerical value keeps on decreasing by pressing the key continuously. · For searching parameters within the 1st, tne 2nd and the 3rd block.

Display/Indication

|	Name	Function
①	Process value (PV)/parameter name display	1) Displays a process value (PV). 2) Displays the parameter symbols at parameter setting mode. 3) Displays various error indications (refer to the "8. Error indications").
②	Set value (SV) indication lamp	The lamp is lit while a set value (SV) is displayed.
③	Set value (SV)/parameter setting display	1) Displays a set value (SV). 2) Displays the parameter settings at parameter setting mode. 3) Flickers at Standby mode. 4) Displays the set value (SV) and "SV-1" alternately when the SV switching function is used.
④	Auto-tuning/self-tuning indicator	The lamp flickers while the PID auto-tuning or the self-tuning is being performed.
⑤	Control output indication lamp	C1 : The lamp is lit while the control output 1 is ON. C2 : The lamp is lit while the control output 2 is ON. (Note 1)
⑥	Alarm output 1 (AL1) indication lamp (Note 1)	The lamp is lit when the alarm output 1 is activated. It flickers during ON-delay operation.
⑦	Alarm output 2 (AL2) indication lamp (Note 1)	The lamp is lit when the alarm output 2 is activated. It flickers during ON-delay operation.
⑧	Heater break alarm output (AL3) indication lamp (Note 1)	The lamp is lit while the heater break alarm output is ON.

Note 1) Control output 2 and alarm function are optional.

4 Display and operation

Standby mode

· To perform standby operation, set "STby" as ON in the 1st block parameter.
· Standby mode:
(Output)　　Control outputs (1 and 2) and alarm outputs (all) are not provided. However, depending on setting of "P-n1", control action, control outputs are provided at the abnormal input.
No alarm output is provided at standby mode, even in (Fault-condition).

Caution　Be careful since the equipment does not provide output of the alarm of the main unit abnormality during the standby operation.

(Control) Control is not performed.
(Display) SV display flickers.

Caution　The SV display does not flicker while the 1st, 2nd and 3rd block parameters are displayed.

(Setting)　SV and parameter settings are able to perform.

Switching by 1st block STby settings

Operation mode

When the SV lamp is lit, the set value (SV) is displayed at the lower line.
The set value (SV) can be changed.

After the data setting, the data are registered automatically in 3 seconds.

1 Change of set value (SV)

2 Shift to the 1st, 2nd and 3rd block parameter
To shift to the other blocks, press the SEL key.

Caution　Depending on the pressing time of SEL key, you can select the block to shift.

SEL pressing time	Shifting block
About 1 sec pressing	1st block
About 3 sec pressing	2nd block
About 5 sec pressing	3rd block

Switching by the SEL key

Parameter setting mode

Press the SEL for 2 sec.

3 Shift to operating condition

Operation mode

Parameter setting procedure

1 Select a parameter you want to set by pressing the ∧ or ∨ key.

2-1 Press the SEL key to allow the parameter to change. (Under the changing condition, the parameter set value flickers).

2-2 Pressing the ∧ or ∨ key, to change the parameter set value.

2-3 After the parameter has been changed, press the SEL key for registration.

3 To shift to Operation/Standby mode, press the SEL key for 2 sec.

1 Parameter selection
Parameter search.

Press the ∧ .　　Press the ∨ .

Press the SEL once.

2 Parameter settings

Parameter change.
∧ Increases parameter set value
∨ Decreases parameter set value

SEL
Registers parameter set value, returning to the parameter shift mode **1** .
∧
By repeating the same procedure, the parameters can be displayed according to the parameter list shown in "5. Setting methods of temperature and parameters."

Parameter	Setting value
P	0.0
P-n1	0 (or 1)
HYS	Any value

Relation between PV and SV	Output
PV > SV	OFF
PV < SV	ON
Example 2 : Direct operation

Parameter	Setting value
P	0.0
P-n1	2 (or 3)
HYS	Any value

Relation between PV and SV	Output
PV > SV	ON
PV < SV	OFF
6-2 | Auto-tuning (AT)

Autotuning is the automatic calculation and entering of the control parameters (P,I and D) into memory.
Prior to the auto-tuning, complete the setting of input range (P-SL,P-SU, P-dP), a set value (SV), alarm setting (AL1, AL2), and cycle time (TC).

How to start the auto-tuning

Set the parameter AT as either "1" or "2" by using ∧ or ∨ key, and press the SEL key to start the auto-turning. Then the point indicator at the lower right starts blinking. At the completion of Auto-tuning, the point indicator stops blinking, then parameter AT is automatically set to 0.

	When auto-tuning is cancelled or not performed.	Standard type (auto-tuning at SV)	Low PV type (auto-tuning at 10%FS below SV.)
Setting code (AT)	0	1	2

① Standard type (AT=1)
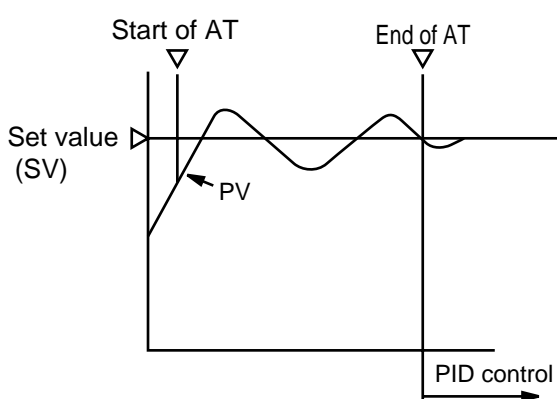

② Low PV type (AT=2) : Overshoot decreased at tuning.
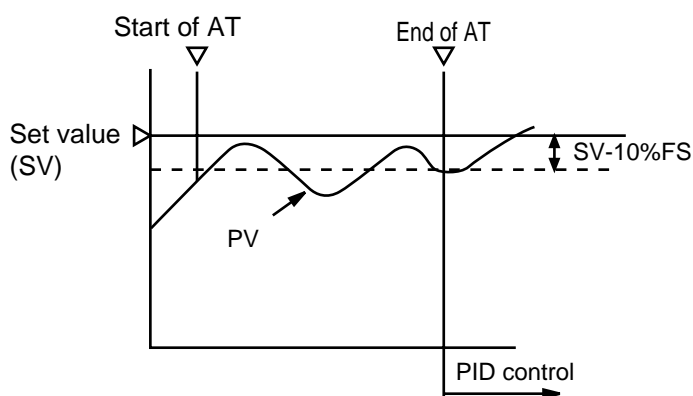

(a) The P.I.D. parameter calculated by auto-tuning remains even if the power is turned off. If the power is turned off before the auto-tuning is completed, you must restart the auto-tuning.

(b) The PV may be changed greatly depending on the process, because the control output is ON/OFF action (two position operation) in the auto-tuning. So, do not use the auto-turning if the process does not allow a significant variation of PV.
In addition, the auto-tuning should not be used in any process such as pressure control and flow control, where a quick-response is required.

(c) If the auto-tuning isn't completed in four hours, the auto-tuning is suspected to fail. In this case, check the wiring and parameters such as the control action, input type, etc.

(d) Carry out the auto-tuning again, if there is any change in SV, input range (P-SL, P-SV or P-dP) or process condition. Perform the auto-tuning if fuzzy control is selected as the control algorithm.

(e) While carring out auto-tuning, PV operates as shown in Figs 1 and 2.

(f) Execute the auto-tuning also when fuzzy control is selected in control type setting.

(g) When resetting the AT parameter, set the parameter to "0" once, then reset it.

6-3 Self-tuning

1) At power on, changing a set value or the external disturbance, tuning is made automatically so that the PID parameters are re-optimized.
   It is useful where modification of PID parameters is required repeatably due to frequent change in process condition.
   If high controllability is important, select the PID or fuzzy control algorithm and use auto-tuning.

2) Setting for self-tuning
   ① Turn on the power and set the SV.
   ② Select SELF at "CTrL" (control algorithm) parameter.
   ③ Turn off the power once.
   ④ Turn on the power of the whole system. The controller should be turned on at the same time with the other equipments or even later. Otherwise, the self tuning might not be performed successfully.
   ⑤ Self-tuning starts. Then the point indicator at the lower right corner starts blinking until the PID parameters are re-optimized.
   Note) Whenever it is necessary to re-try the self-tuning, please set "CTrL" = PID once, and then start the above setting procedure from the beginning.

2nd block parameter

· Set "CTrL" (control algorithm) as SELF.

PID	PID control
FUZY	Fuzzy control
SELF	Self-tuning control

Caution: Setting "CTrL" to SELF starts self-tuning.

3) Self-tuning indication

The point indicator at the lower right corner keeps blinking while self-tuning is underway.

L : Dead time
T : Delay time
4) Self-tuning is executed by any of the following conditions.
  ① During temperature rise at power ON.
  ② During temperature rise at SV changing if necessary.
  ③ When control is out of stable condition and is judged as being out of stable condition continuously.

5) Self-tuning is not executed under the following conditions:
  ① During standby mode
  ② During ON/OFF control
  ③ During auto-tuning
  ④ During ramp/soak operation
  ⑤ During input error
  ⑥ With dual output ("P-n1" $\geq$ 4)
  ⑦ When P, I, D or Ar is manually set

  Under the following coditions, self-tuning is canceled.
  ① When SV is changed.
  ② When Self-tuning can not be completed in about 9 hours after the start.

6) Cautions
  ・ Turn on the power of the whole system. The controller should be turned on at the same time with the other equipments or even later. Otherwise, the selftuning might not be performed successfully.
  ・ Don't change the SV while the self-tuning is executing.
  ・ Once PID parameters are optimized, the self-tuning is not executed at the next power on unless SV is changed.
  ・ After the execution of self-tuning, if the controlability is not your expected level, please select PID or FUZZY at "CTrL" parameter, and then, start the auto-tuning.

6-4 Alarm function (option)

1) Kinds of alarm

- Absolute value alarm, deviation alarm, combination alarm, and zone alarm are available.
  (For details, see Table 4, Alarm action type codes.)

ON delay function

ON delay setting time
Energizing/de-energizing function
> Caution When the power is turned OFF or in Standby mode, even if de-energizing
> function is turned ON, it cannot be output (it is kept OFF).

2) Alarm function

No.	Function	Description	Parameters to set
①	Hysteresis	Set the hysteresis to avoid chattering.	Alarm 1 : A1hY Alarm 2 : A2hY
②	ON delay	The alarm is turned on with delay of a certain seconds as previously set after PV goes in the alarm band.	Alarm 1 : dLY1 Alarm 2 : dLY2
③	Alarm latch	Keeps the alarm ON status once an alarm is turend ON. To cancel the alarm latch, please take one of the following procedure.	Alarm 1 : A1oP Alarm 2 : A2oP
		i) Turn ON the controller again.	
		ii) Turn the alarm latch settings to OFF once.	
		iii) Use alarm latch cancel parameter.	LACH
		iv) Cancel by Digital input.	di-1, di-2
		v) Cancel by communication function.	
④	Error status alarm	Alarm is turned on when error indications are displayed.	Alarm 1 : A1oP Alarm 2 : A2oP
⑤	De-energizing	Alarm output can be de-energized.	Alarm 1 : A1oP Alarm 2 : A2oP

Combination of alarm functions

Please see the table as shown below.
O: Possible combination
X: Impossible combination

	Without HOLD/Timer	With HOLD	With Timer
Alarm latch	O	O	X
De-energizing	O	O	O
ON delay	O	Note 1	X
Alarm in error status	X	X	X

Note 1 ▶ The alarm is not turned on the first time the measured value is in the alarm band. Instead it turns on only when the measured value goes out of the band and enters it again.

▶ Cautions on alarms ▶

No.	Cautions	Items/Classification
1	Note that the ON delay function is effective for alarm in error status.	Alarm in error status
2	Even during "Err" display, alarms in error status work.	Alarm at error indication
3	Even when "LLLL" or "UUUU" is displayed, an alarm function works normally.	
4	Alarm action type codes in No.12 to 15 are also included in No.24 to 27. It is, therefore, recommended to use No.24 to 27. In addition, please note when selecting No.12 to 15, setting in ALM2, dLY2, and A2hy are effective.	Alarm action type code
5	With the HB alarm, ON delay function, de-energizing function and latch function cannot be used.	HB alarm
6	The minimum alarm set value is −199.9.	Alarm set value
7	As the alarm action type changed, the alarm set value may also be changed accordingly.	
8	Note that all of alarm outputs are not provided at the standby condition.	Alarm at standby mode.
9	Error status alarm is not provided at the standby mode.	
10	The HOLD function is effective even if the PV value is in the hysteresis area when the power is turned ON.	

6-5 Ramp/soak function [option]

1. Function

Changes the set value (SV) as the time elapses according to a predetermined program pattern, as shown below.
Either 4 ramp/soak x 2 patterns or 8 ramp/soak x 1 pattern can be programmed. The first ramp starts from the process value (PV) just before the programming is executed.
2. Setting

- Select the program pattern (PTn) and set the rUn at "ProG" parameter.
- Ramp/soak pattern can not be changed while ramp/soak program is running.

PTn	Pattern	Ramp/Soak
1	1	4
2	2	4
3	1 + 2	8

Note:
- The ramp/soak program is canceled if the controller becomes to standby mode.
  Then, if the controller becomes to operation mode, the program doesn't run again.

6-6 Communication function [option]

1) Function
· Data can be written/read through the MODBUS® protocol.

2) Before using this function, please set related parameters as shown below.

3rd block parameter

→ | PV | STno |
| SV ○ | 18 |

Set the station No. at "STno"
(station No. setting paramter).
[Sample: station No. = 18]

→ | PV | CoM |
| SV ○ | 0 |

Set the parity at "COM".

CoM	
0	Odd
1	Even
2	No parity

[Sample: Odd parity]

---

3) Caution
· Station No. can be set in the range of 0 to 255. (No communication is allowed with 0).
· After changing the setting of parity at "COM", please power off and re-start the controller.
· Baud rate is fixed to 9600 bps.

6-7 Digital input (DI function) [option]

1) Function
- ・ With Digital input, the follwing functions are available.
- ① SV switching
- ② Control mode; RUN/STANDBY selection
- ③ Ramp/soak RUN/RESET selection
- ④ Auto-tuning start/stop
- ⑤ Alarm latch cancel
- ⑥ Timer start/reset

2) To use DI function;
- ・ Select the function with the parameter "di-1" or "di-2" refering to the Table shown below.

3rd block parameter

| PV | $d\bar{i}$ - i | or | $d\bar{i}$-2 |
| SV | ○ | i | DI function code (0 to 12) |
3) Table of DI function

DI function code	Function	Description
1	Set value (SV) switching	Switching between local SV and " $5\bar{u}$-i " " $5\bar{u}$-2 " " $5\bar{u}$-3 "
2	Control mode, RUN/STANDBY	At standby mode, control is not provided and SV flickers.
3	Auto-tuning (standard) start	Start/Stop can be switched at the time of DI raising up or dropping down.
4	Auto-tuning (low PV) start	
5	All alarm latch cancel	When this function is not used, DI is not effective.
6	Alarm 1 latch cancel	
7	Alarm 2 latch cancel	
9	ALM1 timer	ON/OFF delay timer operation is available. The remaining time of the timer can be checked with timer-1 and -2 display parameters (first block).
10	ALM2 timer	
12	Ramp/soak RUN/RESET	RUN/RESET of ramp/soak can be performed at the time of DI raising up or dropping down.

6-8 Other functions

The parameters "bAL" and "Ar" are masked at default setting.

If necessary to appear these parameters, please refer to the following procedure.

1) Function

• "bAL" and "Ar" are functions to suppress overshoot.

(Usually it is not necessary to change the setting.)

2) If they aren't optimum value, sometime you don't get the good control. Usually it is not necessary to set them.

3) "Ar"(Anti-reset wind-up) is automatically set by "Auto tuning".

1 bAL

MV is calculated by adding the offset (bAL) to MV', the result of PID calculation, from PV and SV.
2 Ar

The integral range is SV±Ar.

Integral action don't work when PV is out of the range.
Mask/Unmask bAL and Ar

1 To unmask

① Display the "dSP3" in the third block parameter and then subtract 128 from current value.

② Display the "dSP4" in the third block parameter and then subtract 1 from current value.

2 To mask

① Display the "dSP3" in the third block parameter and then add 128 to current value.

② Display the "dSP4" in the third block parameter and then add 1 to current value.

7 | Setting of input type and control algorithm

1 Setting of the input type

* Skip this procedure if the input type is specified when you order.

① Please check if the input type set at "P-n2" is same as what you use.

Choose the sensor type you use from Table 1 shown below, and set the code at "P-n2".
(Example) For T thermocouple, set "P-n2"=7.

(Note) Please refer to the following table for the modification of the input type.

TC ⟷ RTD (within Group I)*	Can be modified by changing "P-n2".
TC/RTD ⟷ 1 to 5Vdc (Group I)* 4 to 20mAdc (Group II)*	Modification not possible

TC : Thermocouple   RTD : Resistance bulb   (*Please refer to table 1)

⇩

② Is setting of input temperature range suitable for the sensor you use?

Standard range to each sensor is shown in Table 3. Select the temperature range suitable for the equipments you use, set lower/upper limit values to "P-SL" / "P-SU" respectively.

(Example) For temperature range 0 to 800 [°C] : Set "P-SL" and "P-SU" to 0 and 800 respectively.

(Note) If the span of setting ranges is smaller than the one of minimum standard range, the accuracy (% full scale) is influenced.

(Note) No standard range is given in case of 1 to 5VDC (4 to 20mA DC) input. Please set the range within the following limitation.
  • Maximum span : 9999
  • Lower limit : -1999
  • Upper limit : 9999

Note:
Please set "P-n2": Input sensor type and "P-SL/P-SU/P-dP": input range setting prior to any other parameter settings. When "P-n2" and/or "P-SL/P-SU/P-dP" is changed, some other parameters may also be influenced. Please check all parameters before starting control.

2 Setting of the algorithm

* Read if the control doesn't work as you expect.

① Select the type of control output action.

	Control output action	Description	Setting procedure
Heating	Reverse	As PV increases, MV decreases. As PV decreases, MV increases.	⇒ Set parameter "P-n1" = 0 or 1. (Refer to Table 2)
Cooling	Direct	As PV increases, MV also increases. As PV decreases, MV also decreases.	⇒ Set parameter "P-n1" = 2 or 3. (Refer to Table 2)

⇩

② Control algorithm (ON/OFF, PID or fuzzy)

Type of control	Description	Setting procedure
ON/OFF control	Output is either ON (100%) or OFF (0%). (Suitable when frequent output switching is inconvenient.)	Set "P" =0.0. Refer to "6-1 ON/OFF control"
PID control	The output signal changes within the range at 0 to 100% according to PID calculation which determine the proportional of ON to OFF in each TC (cycle time).	Select PID at "CTrL". Execute auto-tuning so that optimum P.I.D can be calculated automatically. (PID parameters can be set spontaneously). *Refer to "6-2 Auto-tuning".
Fuzzy control	Fuzzy operation is added to PID providing control with less overshoot.	Select FUZy at "CTrL". Then execute the auto-tuning so that FUZZY control starts.
PID control with self-tuning.	At power on, changing a set value or the external disturbance, tuning is made automatically so that the PID parameters are re-optimized. It is useful where modification of PID parameters is required repeatably due to frequent change in process condition.	Select SELF at "CTrL". Refer to "6-3 Self-tuning".

8 | Error indications

Error indications

This controller has a display function to indicate several types of error code shown below.
If any of the error codes is displayed, please eliminate the cause of error immediately.
After the cause is eliminated, turn off the power once, and then re-start the controller.

Error code	Possible cause	Control output	Group
UUUU	① Thermocouple burnt out. ② RTD (A) line burnt out. ③ PV value exceeds P-SU by 5% FS.	① when the burn-out control output is set as the lower limit (standard): OFF or 4 mA or less ② when the burn-out control output is set as the upper limit: ON or 20 mA or larger	I
LLLL	① The RTD line (B or C) burnt out. ② The RTD line (between A and B or A and C) short. ③ PV value is below P-SL by 5%FS. ④ 1 to 5 VDC or 4 to 20mADC wiring open or short.		
LLLL	① PV value < -199.9 Note) In case of RTD input, "LLLL" is not displayed even if the temperature becomes below -150 ˚C.	Control is continued until the value reaches -5% FS or less, after which burn-out condition will occur.	II
AL3 lamp lit	Break of the heater	Normal control	
Err (SV indication flickers)	Incorrect range setting (P-SL/P-SU).	OFF or 4mA or less	

[Table 1]　Input type code

Parameter : P-n2

Group	Input type	Code
I	RTD	
	· Pt100 (IEC)	1
	Thermocouple	
	· J	2
	· K	3
	· R	4
	· B	5
	· S	6
	· T	7
	· E	8
	· N	12
	· PL-II	13

Group	Input type	Code
II	1 to 5V DC, 4 to 20mA DC	16

In case of 4 to 20mA DC input, mount a 250Ω resistor enclosed in the package box.

· Modification

TC ⟷ RTD (within Group I)	Can be modified by changing "P-n2".
TC/RTD (Group I) ⟷ 1 to 5 V DC / 4 to 20 mA DC (Group II)	Modification is not possible.

[Table 2]　Control output action mode code

Parameter : P-n1

Code	Output	Control output action Output 1	Control output action Output 2	Output at Burn-out* Output 1	Output at Burn-out* Output 2
0	Single (Control output 1)	Reverse action	---	Lower limit	---
1				Upper limit	
2		Direct action		Lower limit	
3				Upper limit	
4	Dual [Control output 1 and 2.]	Reverse action	Direct action	Lower limit	Lower limit
5				Upper limit	
6				Lower limit	Upper limit
7				Upper limit	
8		Direct action		Lower limit	Lower limit
9				Upper limit	
10				Lower limit	Upper limit
11				Upper limit	
12		Reverse action	Reverse action	Lower limit	Lower limit
13				Upper limit	
14				Lower limit	Upper limit
15				Upper limit	
16		Direct action		Lower limit	Lower limit
17				Upper limit	
18				Lower limit	Upper limit
19				Upper limit	

(*) Outputs when Error Indication Group I.
　Please refer to "8. Error indications".
　This is effective even in Standby mode.

Lower limit: OFF　or　4mA or less
Upper limit: ON　or　20mA or more

[Caution for dual output] (option)
(1) Parameter "I" and "D" can not be set separately.
(2) In case "P"=0 (ON/OFF control) for heating side, cooling side becomes ON/OFF control automatically.
(3) In case "Cool" =0.0, cooling side becomes ON/OFF control. And hysteresis is fixed at 0.5%FS.

[Table 3]   Input range (Standard range)

Parameter : *P-SL,P-SU,P-dP*

Input signal type		Range (°C)	Range (°F)	Input signal type		Range (°C)	Range (°F)
RTD (IEC)	Pt100Ω	0 to 150	32 to 302	Thermo-couple	R	0 to 1600	32 to 2912
	Pt100Ω	0 to 300	32 to 572		B	0 to 1800	32 to 3272
	Pt100Ω	0 to 500	32 to 932		S	0 to 1600	32 to 2912
	Pt100Ω	0 to 600	32 to 1112		T	-150 to 200	-238 to 392
	Pt100Ω	-50 to 100	-58 to 212		T	-150 to 400	-238 to 752
	Pt100Ω	-100 to 200	-148 to 392		E	0 to 800	32 to 1472
	Pt100Ω	-150 to 600	-238 to 1112		E	-150 to 800	-238 to 1472
	Pt100Ω	-150 to 850	-238 to 1562		N	0 to 1300	32 to 2372
					PL-ll	0 to 1300	32 to 2372
Thermo-couple	J	0 to 400	32 to 752	DC voltage	1 to 5VDC	-1999 to 9999 (Scaling is possible) • Maximum span : 9999 • Lower limit : -1999 • Upper limit : 9999	
	J	0 to 800	32 to 1472				
	K	0 to 400	32 to 752				
	K	0 to 800	32 to 1472				
	K	0 to 1200	32 to 2192				

Note 1) Except for the following, the input accuracy is ±0.5% FS ±1 digit ±1°C (Input accuracy does not be guaranteed for the ranges of measurement other than in the table above.)
R thermocouple 0 to 500 °C ⎫
B thermocouple 0 to 400 °C ⎭ ：*in these ranges, this controller may display an incorrect process value due to the characteristic of the sensor.*

Note 2) In case a measuring range of -150 to 600 °C or -150 to 850 °C is used for resistance bulb input, temperatures below -150 °C does not be indicated correctly. Therefore, "LLLL" does not appear despite a continuous fall below -150 °C.

Note 3) If the resistance bulb or thermocouple is used at a temperature below the lowest value in the measurement range, the input accuracy cannot be guaranteed.

Note 4) Addition of decimal point is impossible if the input range or span is larger than 999.9 at the RTD/thermocouple input.

[Table 4] Alarm action type code
Parameter : ALM1, ALM2

· Standard alarm code

	ALM1	ALM2	Alarm type	Action diagram
	0	0	No alarm	PV
Absolute value alarm	1	1	High alarm	AL1 AL2 → PV
	2	2	Low alarm	AL1 AL2 → PV
	3	3	High alarm (with hold)	AL1 AL2 → PV
	4	4	Low alarm (with hold)	AL1 AL2 → PV
Deviation alarm	5	5	High alarm	AL1 AL2 SV → PV
	6	6	Low alarm	AL1 AL2 SV → PV
	7	7	High/Low alarm	AL1 AL2 AL1 AL2 SV → PV
	8	8	High alarm (with hold)	AL1 AL2 SV → PV
	9	9	Low alarm (with hold)	AL1 AL2 SV → PV
	10	10	High/Low alarm (with hold)	AL1 AL2 AL1 AL2 SV → PV
Zone alarm	11	11	High/Low deviation alarm (ALM1/2 independent action)	AL1 AL2 AL1 AL2 SV → PV
	-	12	High/Low absolute alarm	AL2 AL1 → PV
	-	13	High/Low deviation alarm	AL2 AL1 SV → PV
	-	14	High absolute /Low deviation alarm	AL2 SV AL1 → PV
	-	15	High deviation /Low absolute alarm	AL1 AL2 SV → PV

· Alarm code with dual set value

	ALM1	ALM2	Alarm type	Action diagram
High /Low limit alarm	16	16	High/Low absolute alarm	A1-L A2-L A1-H A2-H → PV
	17	17	High/Low deviation alarm	A1-L A2-L A1-H A2-H SV → PV
	18	18	High absolute /Low deviation alarm	A1-L A2-L SV A1-H A2-H → PV
	19	19	High deviation /Low absolute alarm	A1-H A2-H A1-L A2-L SV → PV
	20	20	High/Low absolute alarm (with hold)	A1-L A2-L A1-H A2-H → PV
	21	21	High/Low deviation alarm (with hold)	A1-L A2-L A1-H A2-H SV → PV
	22	22	High absolute /Low deviation alarm (with hold)	A1-L A2-L SV A1-H A2-H → PV

	27	27	High deviation /Low absolute alarm	A1-H A2-H A1-L A2-L SV → PV
	28	28	High/Low absolute alarm (with hold)	A1-L A2-L A1-H A2-H → PV
	29	29	High/Low deviation alarm (with hold)	A1-L A2-L A2-H A1-H SV → PV
	30	30	High absolute /Low deviation alarm (with hold)	A1-L A2-L SV A1-H A2-H → PV
	31	31	High deviation /Low absolute alarm (with hold)	A1-H A2-H A1-L A2-L SV → PV

· Timer code

	ALM1	ALM2	Alarm type	Action diagram
Timer	32	32	ON delay timer	DI OUT dLY1 dLY2
	33	33	OFF delay timer	DI OUT dLY1 dLY2
	34	34	ON/OFF delay timer	DI OUT dLY1 dLY2 dLY1 dLY2

Point What is alarm with hold?
The alarm is not turned ON immediately even when the process value is in the alarm band. It turns ON when it goes out the alarm band and enters again.

PV (process value)

Period where lower limit alarm is output

Power ON | Power OFF | Power ON

Lower limit alarm   off   on   off   on   off
Lower limit alarm (with hold)   off   on   off
Note) · When alarm action type code is changed, alarm set value may also become different from previous settings.
  · Please check these parameters, turn off the power once, and then re-start the controller, before starting control.
  · When selecting No.12 to 15, setting in ALM2, dLY2, and A2hy are effective, and output to the AL2 relay.

	Two alarms + 8 ramps / soaks							G				
	Two alarms + Heater break alarm + 8 ramps / soaks	Note 2						H				
10	<Instruction manual> <Power supply voltage>											
	None 100 to 240VAC								N			
	Japanese 100 to 240VAC								Y			
	English 100 to 240VAC								V			
11	<Optional specification 2>											
12	None									0	0	0
13	RS485 (Modbus) communication									M	0	0
	RS485 (Z-ASCII) communication									N	0	0
	Digital input 1 point									S	0	0
	Digital input 2 points	Note 3								T	0	0
	RS485 (Modbus) communication + Digital input 1 point									V	0	0
	RS485 (Z-ASCII) communication + Digital input 1 point									W	0	0

Note 1: Cannot be combined with heater break alarm. (Nos. 2, 3, 6, 7 and H on the 9th digit cannot be specified.)
Note 2: Cannot be combined with RS485 + 1-point digital input.
        (V00 and W00 on the 11, 12, and the 13th digits cannot be specified.)
Note 3: In the case of 2-point digital input, either of control output 2 or heater break alarm can be selected.
        (2-point digital input, control output 2, and heater break alarm cannot be specified at the same time.)

Input signal, measurement range, and set value at the time of deliver are as follows.
    When thermocouple is specified: Thermocouple K, Measurement range; 0 to 400°C, Set value; 0°C
    When resistance bulb is specified: Pt, Measurement range; 0 to 150°C, Set value; 0°C
    When voltage/current is specified: Scaling; 0 to 100%, Set value; 0%

    For the cases other than the above, specify input signal and measurement range.
    Input signal of the thermocouple and the resistance bulb can be switched by key operation on the front panel.

The actuating method of the control output has been set to reverse for control output 1, and to direct for control output 2 at the time of delivery. Note that reverse and direct actuation can be switched by key operation on the front panel.

Specification

Power voltage:	100 (- 15%) to 240V AC (+10%), 50/60Hz
Power consumption:	10VA or less (at 100V AC), 12VA or less (at 220V AC)
Relay contact output:	Control output 1: SPDT contact, 220VAC /30VDC 3A (resistive load)
	Control output 2: SPST contact, 220VAC /30VDC 3A (resistive load)
SSR/SSC driving output *1:	ON: 24V DC (17 to 25V DC)
(voltage pulse output)	OFF: 0.5V DC or less
	Maximum current ; 20mA or less
	Resistive load 850Ω or more
4-20mA DC output:	Allowable load resistor 600Ω or less
Alarm output (up to 2 outputs):	Relay contact (SPST contact) 220V AC / 30V DC 1A (resistive load)
Heater disconnection alarm output:	Relay contact (SPST contact) 220V AC / 30V DC 1A (resistive load)
Communication function *2:	RS-485 interface
	Transmission system ; Half-dueplex bit serial start-stop synchronization
	Transmission rate ; 9600bps
	Transmission protocol ; In conformity to Modbus RTU or Z-ASCII (PXR protocol)
	Transmission distance ; Up to 500m (total length)
	Connectable units ; Up to 31units
Digital input :	Number of inputs; 2 inputs
	Judged as ON : 3VDC or higher
	Judged as OFF : 2VDC or lower
	Input contact capacity ; 5V, 2mA DC
	Input pulse width ; Min 0.5 sec
Ambient temperature:	-10 to 50°C
	-10 to 45°C (when side by side mounting)
Operating ambient humidity:	90%RH or less (no condensation)
Preservation temperature:	-20 to 60°C

*1 : The following table shows the difference of outputs among other micro-controller X series models.

	SSR/SSC driving output		Allowable load resistance for 4 to 20mA DC output
	Voltage	Maximum current	
PXR3	15V DC	20mA	100 to 500Ω
PXR4/5/9	24V DC	20mA	600Ω or less
PXV3	5.5V DC	20mA	600Ω or less
PXV/W/Z	24V DC	60mA	600Ω or less

*2 : A communication converter is required to connect this product with PC.
   Communication converter (recommended items) (option) :
   • RC-77 (insulated type) manufactured by R.A SYSTEMS http://www.ras.co.jp
   • SI-30A (insulated type) manufactured by LINE EYE http://www.lineeye.co.jp
   • KS485 (non-insulated type) manufactured by SYSTEM SACOM http://www.sacom.co.jp
